

# Health & Safety

Management application of findings, events and accidents in operational plants.

Most companies find it difficult to follow up on Health and Safety findings and accidents, in an agile and dynamic way.

This is because most companies use tools or solutions, the limitations of which generate low productivity and results in this area.

## Objectives of our solution

- 360 ° view of S&H management, monitoring findings and plant incidents and accidents in all the company's plants.
- Ensure compliance with current S&H standards, with an easy-to-use and accessible solution for S&H managers at each plant.
- Registration and monitoring of cases, both in their data and in related activities such as visits, meetings, phone calls, emails
- Standardization and systematization of Safety & Hygiene processes.
- Unify the S&H management of the different business units, through a single tool.
- Integrate existing and well-known tools such as MS Outlook, MS Excel, MS Word into a single system.
- Improvement of efficiency, shortening the cycle of S&H processes and obtaining relevant information in a timely manner.
- Assign responsibilities, controls, indicators and profiles necessary to manage the defined processes and their continuous improvement.

# Main Features

- Registration and administration of accidents (events).
- Definition of workflows for greater automation.
- Research and management, prior to the intervention of labour risk insurance company.
- Obtaining metrics and reports for the audit activity.
- Recording of security findings and their mitigation.
- Support of multiple actors, such as operators, purchasing area, suppliers, among others.
- Countdown clock for deadlines.
